

Comparisons of different domestic knife sharpeners carried out on the ISO 8442.5 Cutting test system

Sharpness

- This test data shows that the CATRAHONE Diamond Power generates a higher average sharpness than the other sharpeners tested which means that you will achieve virtually factory sharpness every time you resharpen your knives.

Cutting edge life

- The CATRAHONE creates an edge that last longer than those sharpeners tested, giving you longer cutting life before you need to resharpen again. Which means your knives will last longer.

The data was produced by CATRA , Sheffield, UK, Copyright CATRA 2009
